

## Gladiator ESM (Enterprise Security Monitoring)

**GLADIATOR**  
TECHNOLOGY A PROFITSTARS® SOLUTION

- Do you use a JHA core software system and want the peace of mind that comes from knowing that your core is secure?
- Is your institution taking steps to proactively protect itself from costly information security threats?
- Is your institution able to detect fraudulent activities by employees as well as thwart external threats?
- Are you addressing *red flag* activities as mandated by recent regulatory guidance regarding identity theft?

**Gladiator ESM core monitoring solution is a security monitoring layer designed to handle the demands of today's regulatory mandates regarding information security threats, including identity theft.**

With Gladiator ESM, your JHA core system is monitored 24x7x365 by expert security analysts with extensive knowledge of the latest intrusion trends. Whether you seek protection for your core system from outside hack attempts or from unauthorized internal actions that cause security breaches, Gladiator ESM has you covered with the latest intrusion prevention services.

**ESM assists institutions in complying with regulatory mandates.** Gladiator understands that in today's regulatory environment protecting customers' non-public information and guarding against identity theft have never been more critical to your business operations. Our Enterprise Security Monitoring layer can help protect clients against "red flag" activities as mandated by the recent ID Theft Prevention Program Guidance (requiring compliance by November 1, 2008) as a result of the FACT ACT modifications.

**ESM helps you to be proactive in managing security threats because pre-emptive measures are in place to track key security and performance events in your core system, capture "audit events," and flag any items that require immediate attention.** ESM alerts are correlated into high, medium, and low designations and also into informational categories that indicate the status of your system and accounts in an organized and timely manner. To help you better manage information security within your enterprise, ESM provides easy-to-understand reports that support the related regulatory guidelines.

**Gladiator works exclusively with financial institutions,** and is endorsed by leading national industry vendors, associations, and industry experts. Our staff of professionals will work with you to properly manage your technology, guard non-public confidential information, protect your reputation, and help prevent security breaches. And, you can rely on our comprehensive knowledge of FFIEC guidance to help you pass your next IT exam.
